

WAITING FOR CARE

Reducing Hospital Waiting Time Through Digital Queue Management

Long hospital waiting times are a common problem that can affect patient satisfaction, hospital efficiency, and timely access to healthcare.

339 outpatient patients studied

60 minutes average waiting time from **registration → record printing**

72 minutes average waiting time from **record printing → physician consultation**

Longer waiting times were associated with lower patient satisfaction.
($p = -0.26$ to -0.42 , $p < 0.001$), (Guzman & Madria, 2026).

WHERE DOES THE DELAY HAPPEN?

Registration

Record Printing
(60mins)

Triage / Vital Signs

Physician
Consultation

Treatment /
Discharge

WHY IS IT A PROBLEM?

Patient frustration

Crowded waiting areas

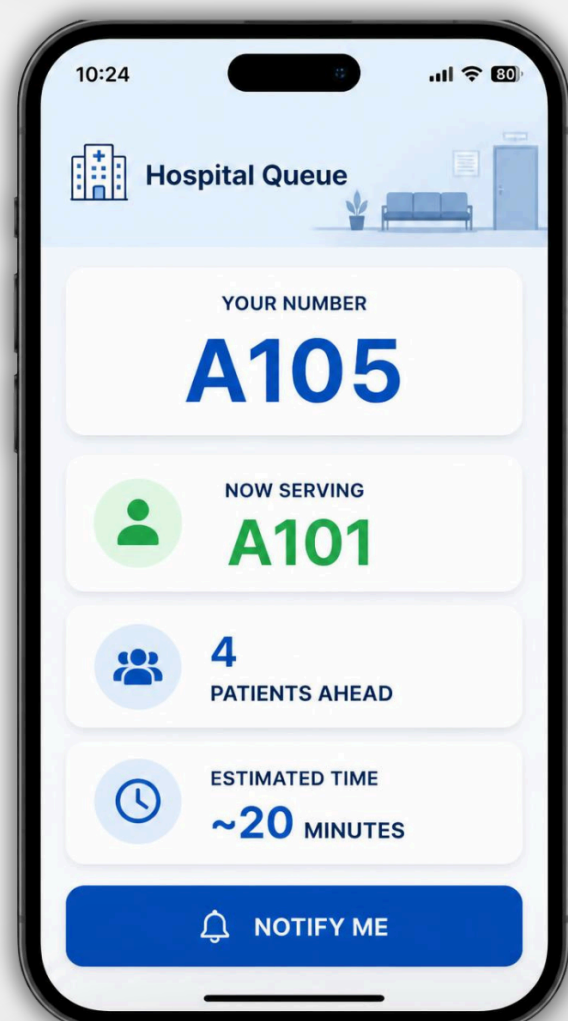

Delayed care

Lower patient
satisfaction

Increased workload

DIGITAL QUEUE MANAGEMENT SYSTEM

HOW IT WORKS

1. 📱 Register
2. 📄 Get a queue number
3. 👁️ Track the queue
4. 🔔 Get notified
5. 🩺 Proceed when called

YOUR TIME MATTERS.
Smarter Queues – Better Flow – Better Care
